EDUCATION

SOFTWARE ENGINEER

2018–2022, Universidad Adventista del Plata
5-year university degree focusing on Computer Science / Computer Engineering / Information Technology

Google Cloud Platform Learning Path

Jul. 2022 - Oct 2022, Google Cloud Skills Boost
Multiple courses focused on the main GCP services such as bigquery, dataflow, dataprep, etc.
(https://partner.cloudskillsboost.google/public_profiles/aab5b8cb-38a9-49b5-bc5b-552c0d83d79b)

SKILLS

Analysis and Design
Database Administration
Object-oriented programming
English 
Spanish 

TECHNOLOGIES

PowerBI
Google Data Studio
BigQuery
Pub/Sub
Google Cloud Storage
Google Cloud Functions
Docker

EXPERIENCE

DEVELOPMENT OF FILE RECORDS MANAGEMENT SYSTEM IN C#

Mar. 2019 – Dic. 2019, Entre Ríos, Argentina
Creation of a managing files capable system for the municipality of Libertador San Martín, following the RUP disciplines, collecting requirements, analysis, design in the first semester and development and implementation in the second.

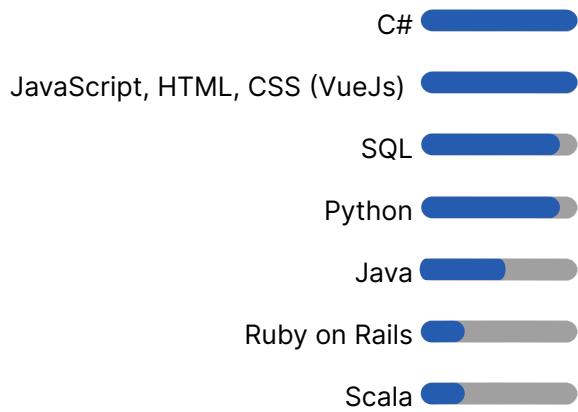

INTERN DEVELOPER AT ACES (ASOCIACIÓN CASA EDITORA SUDAMERICANA)

Apr. 2021 – Nov. 2021, Buenos Aires, Argentina (Remote)
Development of multiple functionalities, mostly in the backend-side of a bookselling application, creation of components in the frontend and data visualization to support the decision making as secondary tasks, Vue.js, .NET, Microsoft SQL Server and PowerBI were among the technologies used.

SOFTWARE DEVELOPER AT ACES (ASOCIACIÓN CASA EDITORA SUDAMERICANA)

Nov. 2021 – Jul. 2022, Buenos Aires, Argentina (Remote)
Structuring and beginning of development for an eCommerce-type page, the frontend was made in Nuxt.js for the management of asynchronous data.
Creation of endpoints in a layered application made in .NET for the backend and Microsoft SQL Server for data storage.
Maintenance of CI/CD pipelines using Github Actions for staging and production deployments
Creation and modification of KPIs in PowerBI to display useful data previously processed and stored in MSSQL.

PROGRAMMING LANGUAGES

EXPERIENCE

SOFTWARE DEVELOPER - DATA ENGINEER AT COREBI S.A

Jul. 2022 – Present, Córdoba Argentina (Remote)

After being instructed in GCP technologies for a month I was assigned to build ETL pipelines using services like Cloud Storage to store temporary data, Cloud Scheduler and Pub/Sub to automate the execution, Bigquery as output of the pipeline and analysis of the result, Cloud Functions for the execution of the python script where the cleaning and processing of the data took place.

Dashboards building on Google Data Studio with data previously processed and stored in Bigquery.

I was also assigned the containerization, deployment and maintenance of an application written in python in an Openshift Container Platform environment
